A total of 28 cu. meters of platinum-clay contact mass for the production of premium-grade gasoline according to the platforming method was said to have been delivered in mid-June 1955 by VEB Leuna Werke Walter Ulbricht to the VEB Kombinat Otto Grotewohl Boehlen. The material was reportedly shipped under escort to the Boehlen plant on 18 June 1955 and immediately put in place. Gasoline production was said to have been started in four furnaces a few days later. At a meeting of specialists from VEB Leuna Werke Walter Ulbricht, the new production method was discussed, and excellent results were reported. It was also stated that more platinum for catalysts will be delivered from the USSR in the fall which will make it possible to set up large-scale production of premium-grade gasoline.
